

Climbing Boulders and Ropes

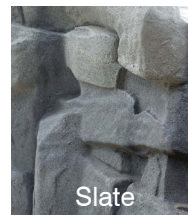

Features

- Ideal for all ages. The large boulders give teenagers a challenging climb, while the small crevices open the imagination of a young child.
- Designed to look and feel like rugged, natural stone. They are made from solid, precast PolyFiberCrete®, which is extremely durable.
- They add a striking visual and physical impact to any landscape.
- Boulders can be freestanding climbers, they can be positioned adjacent to a playstructure, or add ropes to create bridges from boulder to boulder.
- Boulders are designed with natural handholds and footholds. The texture makes the handholds and footholds easy to grip and they will not wear with excessive use.
- Easy to maintain. If a PolyFiberCrete® boulder should become damaged, clean the surface with a wire brush and apply color touch-up. No patching or adding material is required.

Climbing Boulder Colors

Desert Sand

Slate

Rope Colors

- The addition of rope climbers creates bridges from boulder to boulder or boulder to playstructure.
- Four different rope climbers are available.
